FieldPro

New to FieldPro or just want a better understanding of how it works - join us to explore

FieldPro and the Field Inspection Module. We'll walk through a FieldPro setup from scratch and apply all the admin tips and tricks to get the most out of your map - like setting up quick searches, customizing fields, and sharing data through map services. We'll also dive into the Inspection Module and show you how to take your inspections to the next level via life cycle management, definition queries, and dynamic symbology.

This second day will take you from the day one overview of FieldPro into the FieldPro Stake application. Aimed at making the most of your time in the field, this class will cover not only the basic tools used to draft smaller jobs on your iOS device, but will include the methods and tools that will allow you to efficiently design larger scale jobs using FieldPro Stake.
